

Voice User Interface Designer (Freelance)

Do you want to make an impact in healthcare?

Our mission

In the Netherlands, approximately 1 in 6 workers currently work in health care. Looking at the expected future need for health care, this will have to be 1 in 3 workers by 2040. Technology will play an important role in keeping care available and accessible. At Attendi, we work on a solution to this social challenge.

Health care professionals have chosen their profession to help people and connect with them, not to sit in front of a computer. At Attendi, our mission is to enable health care professionals to interact with software the way they do with their clients, simply by using their voices. Our AI software, the Attendi Speech Service, is a solution that allows software suppliers in the health care space to make their solutions fully speech-driven. In Electronic Healthcare Records (EHR), health care professionals can process various registrations with their voice while not losing their sight on clients.

Attendi is a company that is past the start-up phase. Due to our product integrations, Attendi already has a reach of 100.000 health care professionals and this number is growing rapidly. The Attendi Speech Service, which is already in use by health care professionals for daily reporting, is developing into a platform that can be used by software suppliers to make various functionalities speech-driven. An increasing number of health care organizations is discovering the value of this platform, driving Attendi's growth.

Your responsibilities

At Attendi we are improving the user experience of healthcare software through the power of voice technologies. You are familiar with Voice User Interfaces and at Attendi you come up with designs that attempt to solve the problems. Very frequently you put the voice UI in front of our users, and you see how they interact with it. By collecting as much feedback as possible you work towards a final version of your design. When the design is done you communicate the results clearly with our development team. Our development team makes the technology accessible for our software partners that use this to improve the usability of their products. To ensure they include the features as desired by customers you support them in that process through clear documentation and communication if necessary.

- Create comprehensive Voice User Interface Designs
- Define general interaction specifications and systems behaviors for different user touch points
- Coordination of the designs with technical requirements and restrictions
- Conducting user research & usability testing
- Collecting and presenting in-depth insights and voice trends to stakeholders

You are

- Experienced with VUI Design
- Combine your affinity for language with your interest in software interaction
- Have the desire to expand and apply your basic understanding of AI technologies
- Have excellent English skills (nice to have if you also speak Dutch)
- Able to visit customers in the Netherlands
- Are a great team player
- Are motivated to contribute to the quality and accessibility of health care

**What we offer**

- You work on an AI-driven solution used by thousands of health care professionals every day
- You work with young, smart and impact-driven colleagues that are also fun to work with
- You receive great compensation
- You can work remotely when not meeting customers
- Will have a healthy work-life balance
- Ability to work from our office in Amsterdam
