

Lead Developer

About the role

As our Lead Developer, you will be responsible for overseeing and guiding the development of the Attendi Speech Service. You will work closely with our team of software and AI engineers, product owner, and other stakeholders to ensure the timely delivery of high-quality software products. Your responsibilities include managing the software development process from start to finish, researching and implementing full stack features from ideation to delivery, developing and maintaining the technical documentation, using best practices, conducting code reviews, and ensuring adherence to coding standards. You will have ownership over the technical product vision, execution, and day-to-day implementation.

Requirements

- Experience in leading a software development team
- Full-Stack Development and DevOps experience
- Strong understanding of product thinking and execution

This includes the ability to write production-level code. You should also have experience with the full software development life cycle, including coding standards, code reviews, CI/CD and automated testing.

Tech Stack

Attendi Components:

React & Typescript for Web

React Native, Swift & Kotlin for Native

APIs, Backend Systems:

.NET (REST APIs), Python, RabbitMQ, VMs & Serverless Functions, SQL Databases

What we offer

- ✓ Working on impactful solutions for problems in healthcare
- ✓ Transparent and responsible personal development
- ✓ Good salary and shared ownership
- ✓ Possibility to work from home, or our Amsterdam based office
- ✓ Healthy work-life balance
- ✓ A great place to work – feel free to reach out to [our team](#) to ask what it's like!
- ✓ We are an equal and diverse opportunity employer
- ✓ The option to do voluntary work during work hours

Interested in this role?

Please send your resume and motivation letter to careers@attendi.nl and we will reach out to you!

About Attendi

In the Netherlands, healthcare employs one out of every six workers. Due to an ageing population, this will need to double to one out of every three by 2040. It's unlikely this will happen, so technology is expected to help solve the problem.

High-quality care comes from building trust between recipients and providers. Technology should be empathetic to this dynamic rather than disruptive. However, today's electronic health records are graphical and often take up more than one-third of a caregiver's time and can be intrusive.

Our mission is to develop software that enables Electronic Health Care records to be AI-based with voice-activated capabilities. This allows caregivers to interact with software using their voices, which is more natural and efficient, and allows them to focus on the caring for their clients.

Attendi develops the Attendi Speech Service, an AI voice platform for Electronic Health Records. Over 20,000 healthcare professionals use Attendi for their documentation tasks. Our high-quality solutions and scalable go-to-market strategy have driven rapid growth and significant impact on healthcare. Our team is mission-oriented, kind but direct and has a strong bias towards action and continuous improvement. We seek new colleagues who share these values.
