

Product Manager

About the role

At Attendi, Product Management is the art, science and practice of making our product successful. Consistent product success comes from unique customer insights, creative product solutions, and disciplined execution across various functions.

Every team member, including designers, engineers, marketing, sales, and customer service, plays a crucial role in ensuring the success of our product.

As a Product Manager at Attendi you orchestrate opinions, insights, priorities and actions while bringing your own unique insights and creativity to the mix. For the role as a Product Manager we are looking for specific skills such as: Critical thinking, cognitive empathy and influential communication. Fundamental traits for a good match are being highly curious, have a deep care for our end user and being an action oriented person.

Requirements

- **Technical Knowledge:** You have a strong technical background in software development and are able to contribute to technical discussions
- **Communication Skills:** You are able to translate technical concepts into clear language for non-technical stakeholders
- **Team Management:** You have experience in managing cross-functional teams and aligning priorities
- **Partnership Experience:** You have experience in working with software vendors and can ensure their products are compatible with our solutions, align product roadmaps and communicate effectively for successful implementations of our products
- **Product Delivery:** You have a track record of delivering high-quality products and are skilled in project management, product planning and agile development methodologies
- **Interest:** You have a genuine interest in LLM technology developments

At Attendi you will

- Work closely with our end-users
- Boost our product processes
- Set out an ambitious roadmap and ensure a disciplined execution
- Ensure that our solutions solve user problems and are scalable to all of our EHR partners
- Help our team and customers break the opportunities down into small, executable steps to enable fast learning
- Work closely with the founders and grow as fast as the company does

What we offer

- The opportunity to build something that has an impact and changes society for the better
- Work in a fast-paced environment where your learning curve will be steep
- A great place to work – feel free to reach out to [our team](#) to ask what it's like!
- Great compensation and you will own a substantial part of what you're building
- Opportunity to work from home 50% of the time
- A big screen and a MacBook
- A gym subscription within our Amsterdam office to keep you healthy and happy

Please send your resume and motivation letter to careers@attendi.nl and we will reach out to you!

About Attendi

In the Netherlands, healthcare employs one out of every six workers. Due to an ageing population, this will need to double to one out of every three by 2040. It's unlikely this will happen, so technology is expected to help solve the problem.

High-quality care comes from building trust between recipients and providers. Technology should be empathetic to this dynamic rather than disruptive. However, today's electronic health records are graphical and often take up more than one-third of a caregiver's time and can be intrusive.

Our mission is to develop software that enables Electronic Health Care records to be AI-based with voice-activated capabilities. This allows caregivers to interact with software using their voices, which is more natural and efficient, and allows them to focus on the caring for their clients.

Attendi develops the Attendi Speech Service, an AI voice platform for Electronic Health Records. Over 20,000 healthcare professionals use Attendi for their documentation tasks. Our high-quality solutions and scalable go-to-market strategy have driven rapid growth and significant impact on healthcare. Our team is mission-oriented, kind but direct and has a strong bias towards action and continuous improvement. We seek new colleagues who share these values.
